EPO-TEK® H67-MP Advantages & Suggested Application Notes:

- A very high viscosity and thixotropic paste suitable for screen printing or manual hand operations.
- Performs exceptionally well as a die-attach for small chips such as GaAs, LEDs and diodes, as well as SMDs.
- Capable of resisting 260°C green reflow process, low outgassing in hermetic lid-seal processes near 300°C, and organic burn-in up to 150°C/1000 hours storage.
- Complies with the requirements of MIL-STD 883/Method 5011. Yields low levels of water extractable ions such as chlorides.
- Capable of JEDEC Level II die-attach packaging on die-paddles and lead-frames.
- Widely used epoxy; popular choice for non-silver-filled die-attach epoxies; opto-packaging, hybrids, and many types of substrates including kovar, ceramic and BT.
- Available in different viscosity ranges – contact Technical Services at techserv@epotek.com for best recommendation.
- Can be used as nonconductive staking epoxy, in conjunction with EPO-TEK® H37-MP for attaching SMDs to hybrid circuits.
- A lower temp cure alternative to EPO-TEK® H65-175MP.
